Office Action Summary

Art Unit: 2811

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103 as unpatentable over Koike et al, cited by applicant. See Figure 2, column 4, lines 4-7, 46-52. It would have been obvious to have the substrate 1 at ground and the electrodes 13 (Figure 2) either connected to the substrate 1 or via a fixed potential (claim 2). The "interference filter" reads on "silicon oxide" layer 12R, 12G, 12B and "polysilicon" layer 13. The claims are broad in scope.

Claim 1 is rejected under 35 U.S.C. 102 as unpatentable as shown by Nagasaki et al, also cited by applicant. See Figure 1 with "interference filter" including "insulating" layer 4 and "conductive" layer 9. The claim is broad in scope.
